

BEACHCOMBER

ClearTech™

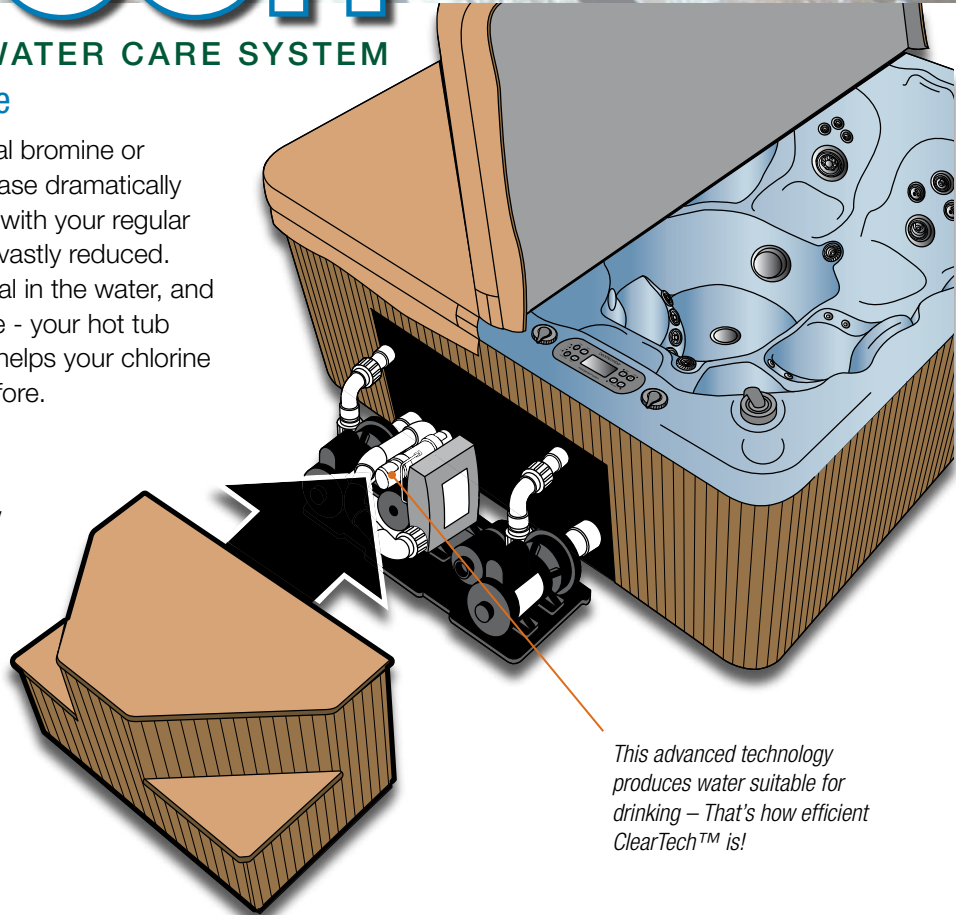

UV WATER CARE SYSTEM

Simplified, Less Expensive Water Maintenance

Because it eliminates much of the work of the traditional bromine or chlorine sanitizers, the use of these products will decrease dramatically with the ClearTech™ UV Water Care System. Coupled with your regular sanitizing system, your water maintenance and cost is vastly reduced. Beachcomber's ClearTech™ does not leave any residual in the water, and causes your water to consume less chlorine or bromine - your hot tub approaches a more 'chemical free' state. ClearTech™ helps your chlorine or bromine that you do use, to last longer than ever before.

Drinking Water Standards

The process of sanitizing water with UV light is not new to public health. For decades, many cities, towns and counties around the world have used this method for the purification of drinking water. Once the UV treated water is returned to the hot tub, it is disinfected, to the high grade standards of drinking water. The water that comes from the UV unit is completely sterilized, back to the people in the hot tub - ready for the cycle of cleansing again through the filtration and the ClearTech™ system.

This advanced technology produces water suitable for drinking - That's how efficient ClearTech™ is!

The Essence of Beachcomber

Hear about the care and attention in every hand built Beachcomber. This DVD is a moving tribute to the men & women who build our product.

ClearTech™ Gives You Extra Benefits

- Low chlorine or bromine use
- Low or no chlorine / bromine odor due to decreased use
- No more bleached out bathing suits
- The system does not affect the water's pH level
- The system does not produce any harmful by-products or residues
- There are no handling hazards required as with chlorine or bromine
- The system offers fast water sterilization over traditional granular shocks
- Disables and destroys bacteria, viruses and parasites
- The system produces sterilized water with no residuals of any kind

Your Authorized Beachcomber Dealership

“ClearTech™ UV Water Care System is virtually maintenance free.”

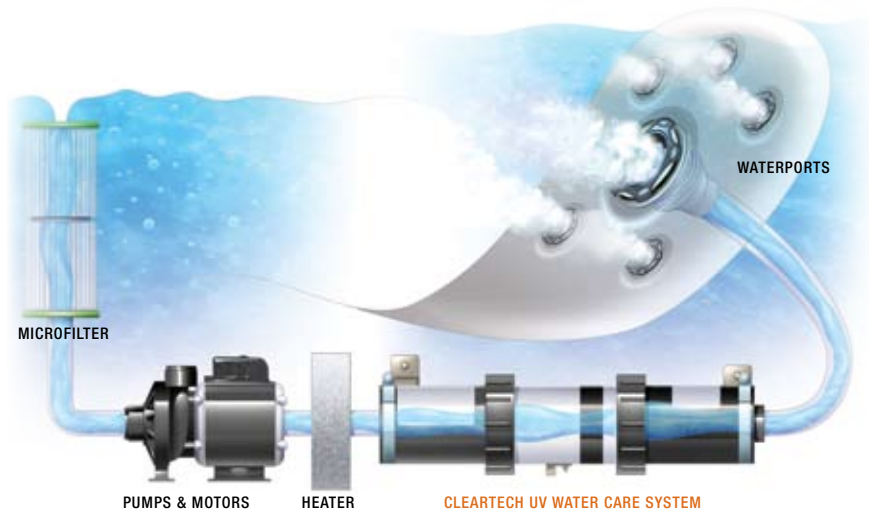

Beachcomber offers you the latest technology to cleanse water in your hot tub.

Committed To Environmental Stewardship

We choose suppliers and business partners that share our values of conservation, preservation and innovation. Beachcomber's ClearTech™ UV Water Care System is innovative, and shows our desire to give you options to enjoy clean and clear water. This system does not produce any chemicals or by-products – it simply destroys these harmful organisms on contact.

Localized Support For You

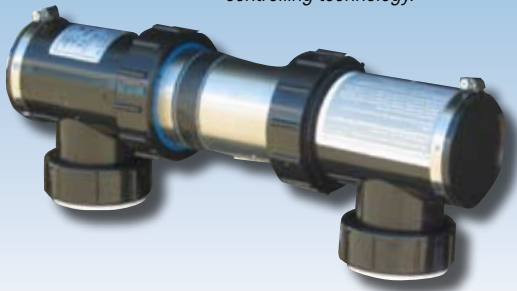

With our dealerships across North America, the hot tub owner can have their water tested and analyzed to ensure proper water sanitation. This is necessary for safe water therapy and relaxation in your hot tub. Beachcomber has been committed to the customer since day one! We are celebrating our 30th Anniversary in 2008, and are proud to offer you this new water management system to care for your water.

How ClearTech™ Works

As the hot tub water passes through the stainless steel unit, the water is exposed to a specialized, intense UV Lamp. On the beach, UV light can burn your skin; but in this chamber, directed high intensity UV light eliminates 99.9 % of bacteria, viruses and pathogens on contact within one to three seconds. As the water passes through, harmful organisms exposed to the lamp are sterilized. This powerful UV light also destroys chloramines, which creates the familiar, unpleasant odor and smell often found in swimming pools and hot tubs.

Beachcomber's ClearTech™ unit uses the latest in bacteria controlling technology.

Top Performance With ClearTech™ UV Water Care System

Beachcomber factory technicians install a specialized, stainless steel fixture inside the equipment area along with the pumping equipment, designed specifically to work with our component system. The unit contains a specially designed, high output lamp that unleashes the power of UV Light.

Beachcomber's contained, concentrated UV Light in our ClearTech™ System gives your hot tub a new level of clean water. This effective, EPA registered system can be installed at the time of production at the factory facility.
